Flow regulating valve.

Allows a one-way flow, preventing the back flow.

-Sturdy construction in Sst and brass.

-O ring Viton

-Return action of piston carried out by a spring

-Minimum pressure loss.

-Rapid intervention at minimum flow variation

Technical manual: E 201

JONE DI SISTEMA

DIMENSIONAL DRAWING

INSTRUCTIONS

SELECTION

This product is to be utilized with clean fresh water, even slightly additivated with normal detergents. For use involving different or corrosive liquids, contact the PA Technical department. Appropriate filtration should be installed when using unclean liquids. Choose the valve in line with the data of normal running (system rated pressure, max flow and max temperature). In any case, the pressure of the machine should not exceed the permissible pressure rate imprinted on the valve.

INSTALLATION

Make sure that the system is well proportioned. In particular, fit a piping system in line with the flow and pressure specifications. A bad proportioned system can ruin, without repair, all single components or damage the performance. This accessory, on a system that produces hot water, must be fitted in front of the heat generator. This product is bound to be incorporated on a finished machine. On a system that generates hot water, anticipate the fitting of accessories that limit the accidental increase of fluid temperature.

Always install a safety valve that protects the pressurized inlet channel.

ATTENTION: During assembly, respect the direction of the flow indicated on the valve. Use fittings internally chamfered. See fig.A dimensional drawing.

The valve is designed to work in installations that remain always full of water. If it appears necessary to empty the part of the circuit downstream of the valve, it is advisable to adopt an aparatus that guarantees a gradual start of the pump or the filling of the circuit at low pressure.

OPERATIONS

Water flows freely in a one-way direction, while it is totally blocked in the opposite direction. Hermetic sealing is ensured by Viton seals.

The internal construction allows a rapid convertion in case of back flow and low pressure drop.

PROBLEMS AND SOLUTIONS

| PROBLEMS | PROBABLE CAUSES | SOLUTIONS |
|------------------------|---|--|
| Valve leakage | Worn out seal Material matter in the seat Worn out seat | Replace Remove and clean Replace valve body |
| Slow closure | Valve not properly sized Piping too small | Change type of valve Replace |
| Rupture of Or & spring | Fittings not chanfered internally | Fulfil internal chamfer as per fig.A dimensional drawing |

REGULATIONS

The Project and construction of our products comply with: norm CEI EN 60335-2-79 first edition, published 1999-03 and relative variations to the project of norm prEN1829.

Read this manual before starting the assembly

For a correct utilization, follow the directions described in this manual and re-print them on the <u>Use and maintenance</u> <u>manual of the machine.</u>

The present manual is valid for all valves named VNR - O VNR - I

MAINTENANCE

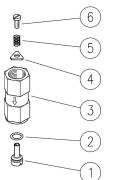

Maintenance has to be carried out by Specialized Technicians.

SPECIAL: every 800 working hours(circa 20,000 cycles), control the wear of the seals and internal parts. ATTENTION: reassemble the valve in the correct manner paying special attention to the flow direction indicated on the valve.

.The manufacturer is not to be considered responsible for damage as a result from incorrect fitting and maintenance-
